PORTFOLIO

AMBER HONEA

Data Analyst

Administrative & Data Analytics Professional specializing in automation, reporting, workflow optimization, and healthcare operations analytics.

Skills:

- Python
- Excel
- Power BI
- SQL
- Power Query
- Google Sheets
- EMR Systems
- Data Cleaning & Reporting

Certifications:

- Professional Teaching License 7-12 Mathematics
- Google Data Analytics Certification

Hi, I'm Amber — a former math teacher turned healthcare operations and data analytics professional with a passion for solving problems and making systems work better. Over the years, I've built experience in everything from clinic operations and EMR management to Python automation, Power BI dashboards, and advanced spreadsheet reporting.

I enjoy finding ways to simplify complicated processes, automate repetitive tasks, and turn messy data into something useful and actionable. My background in education gave me strong communication and leadership skills, while my work in healthcare and analytics has strengthened my technical and operational mindset.

Whether I'm building a reporting system, troubleshooting workflow issues, or creating data visualizations, I love work that combines organization, creativity, and problem-solving.

PROJECTS:

PDF Data Extraction Automation

Developed a Python-based PDF extraction tool using PyMuPDF (fitz) and pandas to automate data collection from patient/device reports. The script extracts text from multi-page PDFs, identifies key device information, and exports structured results into Excel/CSV formats for operational tracking.

Skills Used:

- Python
- Pandas
- PyMuPDF
- File automation
- Data extraction

Impact:

- Reduced manual review time
- Improved consistency of reporting
- Automated repetitive data-entry tasks

```
1  import pandas as pd
2
3  # Load files
4  loops_df = pd.read_excel("loops.xlsx")
5  ao_df = pd.read_csv("AO 05 - Loop.csv")
6
7  # Build matching keys
8  # CSV: Column D + Column C
9  ao_df["match_key"] = (
10     ao_df.iloc[:, 3].astype(str).str.strip().str.upper() + "|" +
11     ao_df.iloc[:, 2].astype(str).str.strip().str.upper()
12 )
13
14 # XLSX: Column B + Column A
15 loops_df["match_key"] = (
16     loops_df.iloc[:, 1].astype(str).str.strip().str.upper() + "|" +
17     loops_df.iloc[:, 0].astype(str).str.strip().str.upper()
18 )
19
20 # Create lookup from XLSX Column E
21 lookup = dict(zip(loops_df["match_key"], loops_df.iloc[:, 4]))
22
23 # Put matched values into Column G of CSV
24 ao_df.iloc[:, 6] = ao_df["match_key"].map(lookup)
25
26 # Remove helper column
27 ao_df.drop(columns=["match_key"], inplace=True)
28
29 # Save updated CSV
30 ao_df.to_csv("AO_05_UPDATED.csv", index=False)
31
32 print("Done! Saved as AO_05_UPDATED.csv")
```

Financial & Operational Spreadsheet Systems

Built advanced spreadsheet systems using Excel and Google Sheets to track financial data, operational metrics, and workflow management. Created automated formulas and lookup systems to reduce manual reconciliation and improve reporting accuracy.

Skills Used:

- SUMIFS
- XLOOKUP/VLOOKUP
- Conditional formulas
- Data matching
- Boolean logic
- CSV/Excel integration

Example Projects:

- Automated cross-file matching between CSV and XLSX datasets
- Conditional financial tracking systems
- Dynamic reporting dashboards

Data Transformation & Cleaning

Used Power Query to clean, organize, and transform patient and clinic datasets for operational reporting and workflow management.

Skills Used:

- ETL workflows
- Data transformation
- Query building
- Data normalization
- Excel Power Query

Impact:

- Improved data usability
- Streamlined reporting preparation
- Reduced repetitive manual cleanup

Interactive Dashboard Development

Designed Power BI dashboards to visualize clinic compliance metrics and operational performance across multiple locations.

Skills Used:

- Power BI
- Dashboard visualization
- KPI reporting
- Data filtering
- Trend analysis

Dashboard Features:

- Clinic-level compliance tracking
- Interactive filtering
- Performance comparisons
- Operational metric visualization

DATA HAS BEEN MANIPULATED FOR SECURITY AND SAFETY

Healthcare Operations Analytics

Supported multi-clinic healthcare operations through scheduling systems, EMR database management, onboarding workflows, productivity tracking, and operational reporting.

Systems & Tools:

- EMR databases
- Google Workspace
- Microsoft Excel
- Reporting systems
- Scheduling software

Focus Areas:

- Workflow optimization
- Data accuracy
- Administrative operations
- Team support and onboarding
